
FIELD MANUAL · 9 WEAPONS · 3 CHASSIS

MOTOR COMBAT

CARS & WEAPONS

Nine weapons. Three chassis. No sharing. Pick a car and you have picked all three of your guns — this is what each one of them does, and what it is for.

FIREBALL

PEPPERBOX

AFTERBURNER

SPLINTER

SKEWER

LANCE

THUMPER

SHOCKWAVE

BULWARK

All figures read straight from the shipping balance tables. Damage shown at an average chassis unless a chassis is named.

THE BARS

DAMAGE

Everything one press can put into a single car if all of it connects. For a shotgun that is every pellet; for a burning cone that is every tick of it.

RATE

How often you get to press. Counts the wind-up and the burst, not just the recharge.

REACH

How far the shot travels, or how far the beam grows. The arena is 1280 units wide and a car is 48 long.

AREA

How much room the hitbox covers. Big area forgives bad aim.

COMMITMENT

Wind-up plus recovery plus recharge — how long the press owns you.

SLOTS

1. GO-TO

Fills every gap. Never gates anything else you carry.

2. MID

A real burst, with a real aiming or positioning condition.

3. ULTIMATE

A commitment. Used properly, it wins the fight.

TERMS

LOCK-ON

Some weapons fire at whatever the car has locked instead of straight down the nose. The lock reaches 400 units and aims where the target *is*, with no lead — so it helps most up close. Six of the nine weapons do not use it at all.

WIND-UP

Delay between the press and the shot. You keep driving, but you cannot take the press back.

RECOVERY

Lockout on your *other* two slots after a press.

RECHARGE

Time before this weapon is ready again. It starts at the last shot of the press, not the first.

STOCK

Shots you can bank. One weapon has them.

PIERCE

Cars a shot carries on through after the first one it hits.

ATTACK SCALE

Your chassis multiplies every weapon's damage. Rectangle 0.8×, Oval 1.2×, Hexagon 1×.

The yardstick. An average car has 500 hull HP.

Every “% of a car” in this book is measured against that, before your chassis's attack scale is applied.

The sim runs at 30 ticks a second, so every duration here is rounded up to a whole tick in play.

THREE CHASSIS, ONE TRIANGLE

RECTANGLE

THE RUNNER

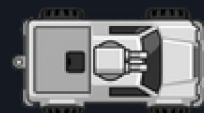

Your driving is your aim.

OVAL

THE GUNNER

Reach and precision, punished hard when caught.

HEXAGON

THE BASTION

It cannot chase — so it makes you come to it.

Rectangle catches Oval · Oval kites Hexagon · Hexagon punishes Rectangle. Nobody is safe from everybody — and the kit is most of the reason why.

“Your driving is your aim.”

The fastest thing on the map and the one that hits softest. Rectangle cannot win a damage race and cannot win a brawl — every weapon in the kit is short-to-medium range and rewards being in motion, so it is your speed doing the work, not your gun.

SPEED		80	540 u/s top
ATTACK		30	0.8× damage
HULL		40	400 HP
MASS		35	ram authority

BEATS

Closes on Oval before its wind-ups can resolve.

LOSES TO

Hexagon. Rectangle must come close to use its kit, and close is where Hexagon lives.

THE KIT — one page each, overleaf

FIREBALL

SLOT 1 — GO-TO

The shot everyone knows.

DAMAGE	RECHARGE	REACH	LOCK
40	0.5s	900	Yes

PEPPERBOX

SLOT 2 — MID

A drive-by, in six pieces.

DAMAGE	RECHARGE	REACH	LOCK
132	1.8s	600	No

AFTERBURNER

SLOT 3 — ULTIMATE

Catch them. Then cook them.

DAMAGE	RECHARGE	REACH	LOCK
231	13s	220	No

FIREBALL

EMBER BOLT · LOCKS ON

The shot everyone knows.

DAMAGE		50 full connect
RATE		2 presses/s
REACH		900 units
AREA		Circle, 24 across
COMMITMENT		0.5s locked in

Two a second, out to nine tenths of the arena, with a 24-unit disc for a hitbox — three quarters of a car's width. It finds its own target inside 400 units, so the only thing you have to do is keep the trigger warm.

This is the yardstick every other weapon in the game was balanced against: five unbroken seconds of Fireball kills an average car, and that is where the number 50 came from.

USED PROPERLY

Never stop pressing it. Fireball has zero recovery, so it gates nothing — you can keep throwing bolts into a target while your Afterburner is already cooking them.

DAMAGE	50 10% of an average car
ON RECTANGLE	40 0.8× attack scale
RECHARGE	0.5s single stock
SUSTAINED	100 dps if every press connects
REACH	900 70% of the arena · 18.8 car lengths
SPEED	900 u/s crosses its range in 1000ms
HITBOX	24 across circle
RECOVERY	none gates nothing else
LOCK-ON	Yes assists inside 400 units

PEPPERBOX

THREE VOLLEYS OF TWO · 10° FAN · NO LOCK

A drive-by, in six pieces.

DAMAGE		168 full connect
RATE		0.5 presses/s
REACH		600 units
AREA		Circle, 14 across
COMMITMENT		2s locked in

Three bursts of two pellets, a tenth of a second apart, spread across a narrow fan. Each burst leaves from wherever your nose is pointing on its own tick – so driving straight clusters all six into one fist, and turning through the press sprays them across an arc.

No aim assist. This is your gun, not the game's. The full burst is roughly a third of an average car delivered inside 200 milliseconds; Fireball needs 1.7 seconds to match it.

USED PROPERLY

Fire it on the pass, at contact range. Realistically three or four pellets land, so its payoff decays with distance – which is what makes it a closing tool rather than a poke.

DAMAGE **28 × 6**
per shot

FULL CONNECT **168**
34% of an average car

ON RECTANGLE **22 × 6 = 132**
0.8× attack scale

RECHARGE **1.8s**
single stock

SUSTAINED **84 dps**
if every press connects

REACH **600**
47% of the arena · 12.5 car lengths

SPEED **800 u/s**
crosses its range in 750ms

HITBOX **14 across**
circle

VOLLEY **3 × 2**
100ms apart · 10° fan

RECOVERY **200ms**
other slots locked

LOCK-ON **No**
fires down your nose

AFTERBURNER

FLAME CONE · WELDED TO YOUR NOSE · TICKS

Catch them. Then cook them.

DAMAGE		286 full connect
RATE		0.08 presses/s
REACH		220 units
AREA		Cone, 55° × 220
COMMITMENT		13.2s locked in

A wide cone bolted to the front of the car for a little over two seconds, burning everything inside it five times a second. It sweeps as you steer, and it dies the instant you do.

Held on a target for the full duration it is over half an average car's health. A four or five tick sweep on a drive-by is still the biggest press in the kit.

USED PROPERLY

Press it when you are already on somebody's bumper. No other chassis can catch a fleeing car — this is what turns the catch into a kill. Recovery is tiny on purpose: keep firing Fireball the whole time it burns.

DAMAGE **26 × 11**
per tick

FULL CONNECT **286**
57% of an average car

ON RECTANGLE **21 × 11 = 231**
0.8× attack scale

RECHARGE **13s**
single stock

SUSTAINED **22 dps**
if every press connects

REACH **220**
17% of the arena · 4.6 car lengths

SPEED **1100 u/s**
full extent in 200ms

HITBOX **55° × 220**
cone

LIFETIME **2.2s**
rides your car

RECOVERY **200ms**
other slots locked

LOCK-ON **No**
fires down your nose

Incoming Afterburner draws in this colour — #F59F00 . Every car firing it fires the same shade.

“Reach and precision, punished hard when caught.”

A glass cannon that wants never to be touched. Every weapon reaches, and two of the three carry a real aiming or timing condition. The hardest kit in the game to land — which is exactly what the damage lead is paid for.

SPEED		50	405 u/s top
ATTACK		70	1.2× damage
HULL		30	300 HP
MASS		45	ram authority

BEATS

Kites Hexagon forever; it can never close the speed gap.

LOSES TO

Rectangle, which arrives before you have finished winding up.

THE KIT — one page each, overleaf

SPLINTER

SLOT 1 — GO-TO
Three darts. Spend them well.

132	2.4s	1100	No

LANCE

SLOT 3 — ULTIMATE
Seven tenths of a second of nerve.

DAMAGE	RECHARGE	REACH	LOCK
216	16s	1200	No

SPLINTER

BANKED DARTS · THIN AND FAST · LOCKS ON

Three darts. Spend them well.

DAMAGE		30 full connect
RATE		2.5 presses/s
REACH		850 units
AREA		Circle, 10 across
COMMITMENT		0.4s locked in

Up to three shots held in reserve, released as fast as an eighth of a second apart, each one recharging on its own timer. Thin, quick, long-ranged, and it finds its own target.

Tap one dart per recharge and you sustain output forever. Dump all three and you put a fifth of a car out in a quarter second — then stand silent for well over a second.

USED PROPERLY

Tapping wins the long fight; dumping wins the moment. Choosing between them every few seconds is the entire weapon. Do not dump on reflex.

DAMAGE **30**
6% of an average car

ON OVAL **36**
1.2× attack scale

RECHARGE **0.4s**
per stock · 3 banked

SUSTAINED **75 dps**
if every press connects

REACH **850**
66% of the arena · 17.7 car lengths

SPEED **1100 u/s**
crosses its range in 773ms

HITBOX **10 across**
circle

SALVO **3 × 36 = 108**
dumped in 0.26s

RECOVERY **none**
gates nothing else

LOCK-ON **Yes**
assists inside 400 units

SKEWER

PIERCING LANCE · PASSES THROUGH TWO CARS · NO LOCK

Line them up.

DAMAGE		110 full connect
RATE		0.38 presses/s
REACH		1100 units
AREA		Ellipse, 44 × 10
COMMITMENT		2.9s locked in

A long, thin, very fast bolt that crosses almost the whole arena and does not stop at the first car it hits. Short wind-up before it leaves.

Pierce counts cars AFTER the first, so this is two cars, not one. Catching a second body on the same line very nearly doubles the press.

USED PROPERLY

Aim assist is switched off deliberately — this could take it and does not. Lining two enemies up is meant to be the highest-value press in the game, and handing that to the lock would be giving it away.

DAMAGE **110**
22% of an average car

ON OVAL **132**
1.2× attack scale

RECHARGE **2.4s**
single stock

SUSTAINED **42 dps**
if every press connects

REACH **1100**
86% of the arena · 22.9 car lengths

crosses its range in 786ms

HITBOX **44 × 10**
ellipse

PIERCE **2 cars**
keeps going after the first

WIND-UP **250ms**
8 ticks — you are visible

RECOVERY **200ms**
other slots locked

LOCK-ON **No**
fires down your nose

LANCE

STAMPED BEAM · ONE HIT PER CAR · NO LOCK

Seven tenths of a second of nerve.

DAMAGE		180 full connect
RATE		0.06 presses/s
REACH		1200 units
AREA		Beam, 20 × 1200
COMMITMENT		17.7s locked in

A long wind-up during which you are a stationary, visible, extremely soft target. Then a narrow beam stamped clean across the arena, effectively instantly. It hits each car once and is gone.

The wind-up is only half the cost. A full second of recovery afterwards means a miss buys your opponent a free second as well.

USED PROPERLY

Fire it at somebody who cannot spend the next three quarters of a second dodging: cornered, mid-commitment, or standing behind a second car so the beam catches both. On this hull, a whiff is close to a death sentence.

DAMAGE **180**
36% of an average car

ON OVAL **216**
1.2× attack scale

RECHARGE **16s**
single stock

SUSTAINED **11 dps**
if every press connects

REACH **1200**
94% of the arena · 25 car lengths

SPEED **6000 u/s**
full extent in 200ms

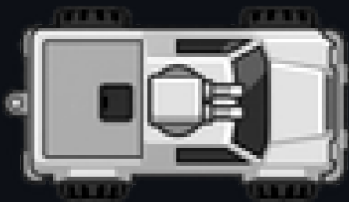

HITBOX **20 × 1200**
beam

LIFETIME **0.35s**
stamped in place

WIND-UP **700ms**
21 ticks — you are visible

RECOVERY **1000ms**
other slots locked

LOCK-ON **No**
fires down your nose

“It cannot chase — so it makes you come to it.”

Two of three weapons are contact-range and the third denies ground outright. Hexagon converts the biggest hull in the game into the right to BE somewhere, which is the only currency a chassis that cannot reposition has.

SPEED		30	315 u/s top
ATTACK		50	1× damage
HULL		70	700 HP
MASS		85	ram authority

BEATS

Rectangle, the moment it commits to contact range.

LOSES TO

Oval, which simply refuses to come within reach.

THE KIT — one page each, overleaf

THUMPER

SLOT 1 — GO-TO
Slow, fat, and hard to argue with.

DAMAGE	RECHARGE	REACH	LOCK
75	1s	550	Yes

SHOCKWAVE

Get off me.

DAMAGE	RECHARGE	REACH	LOCK
100	5s	150	No

BULWARK

SLOT 3 — ULTIMATE
You may not come in.

DAMAGE	RECHARGE	REACH	LOCK
280	15s	500	No

THUMPER

HEAVY SLUG · BIGGEST PROJECTILE IN THE GAME · LOCKS ON

Slow, fat, and hard to argue with.

DAMAGE		75 full connect
RATE		1 presses/s
REACH		550 units
AREA		Circle, 40 across
COMMITMENT		1s locked in

A lumbering shell with the largest projectile hitbox in the game. It takes well over a second to cross its own range, so at distance it is genuinely dodgeable — and in a brawl it is near-unmissable.

Hexagon is slower than everything else on the map. Without one weapon that reaches at all, the slowest chassis has no answer to a patient opponent. Thumper is that weapon.

USED PROPERLY

It buys pressure, not a ranged win. Use it to make kiting cost something while you close, and lean on it hard the moment anyone is inside a car length or two.

DAMAGE **75**
15% of an average car

ON HEXAGON **75**
1× attack scale

RECHARGE **1s**
single stock

SUSTAINED **75 dps**
if every press connects

REACH **550**

crosses its range in 1222ms

HITBOX **40 across**
circle

RECOVERY **none**
gates nothing else

LOCK-ON **Yes**
assists inside 400 units

SHOCKWAVE

HUGE CONE · HUGS THE CHASSIS · ONE HIT PER CAR

Get off me.

DAMAGE		100 full connect
RATE		0.2 presses/s
REACH		150 units
AREA		Cone, 140° × 150
COMMITMENT		5.2s locked in

The widest hitbox in the game and the shortest-lived: a cone that wraps the front of the car for a quarter of a second and hits every enemy in it exactly once, hard.

It is not really aimed. It is triggered — it only needs people to be near you, which on this chassis is most of the match.

USED PROPERLY

Anti-ram, anti-dive, anti-Rectangle. The moment somebody commits to contact range, this is the button that makes them regret arriving.

DAMAGE	100
	20% of an average car
ON HEXAGON	100
	1× attack scale

	rides your car
RECOVERY	200ms
	other slots locked
LOCK-ON	No
	fires down your nose

BULWARK

STAMPED ZONE · TICKS · LINGERS

You may not come in.

DAMAGE		280 full connect
RATE		0.07 presses/s
REACH		500 units
AREA		Cone, 60° × 500
COMMITMENT		15.2s locked in

A wide cone dropped into the world and left there for three and a half seconds, re-arming against anything still inside it several times a second. It grows out over a full second, so it is visible before it is dangerous.

It cannot hurt you, and there is no friendly fire. You can park inside your own Bulwark. That asymmetry is most of the weapon: it is not a hazard, it is an exclusion zone.

USED PROPERLY

Drop it on yourself to become unapproachable for three seconds, or lay it across the only path between an enemy and their escape. Damage is the secondary output — the ground is the point. But never treat it as a wall you can drive through.

DAMAGE **35 × 8**
per tick

FULL CONNECT **280**
56% of an average car

ON HEXAGON **35 × 8 = 280**
1× attack scale

RECHARGE **15s**

“Full connect” is everything one press can land on a single car. “% of a car” is that figure against an average 500 HP hull, before your chassis’s attack scale. “DPS” assumes every press connects in full and counts wind-up, burst and recharge.

DAMAGE PER PRESS, RANKED

Full connect, before any chassis’s attack scale. The top three bars are the three ultimates — and also the three longest waits.

READ THE COLOUR, KNOW THE SHOT

RECTANGLE

- Fireball #E8590C
- Pepperbox #B45309
- Afterburner #F59F00

OVAL

- Splinter #0CA5B0
- Skewer #1864AB
- Lance #6741D9

HEXAGON

- Thumper #495057
- Shockwave #5C940D
- Bulwark #862E9C

Shot colour is per weapon, never per player — the car wearing your enemy’s colour is the thing on screen. Colour answers *who is shooting*; shape answers *what is coming*.

PRESSES TO WRECK

WEAPON	VS RECTANGLE 400 HP	VS OVAL 300 HP	VS HEXAGON 700 HP	PER PRESS	FIRING FROM
FIREBALL	10	8	18	40	Rectangle
PEPPERBOX	4	3	6	132	Rectangle
AFTERBURNER	2	2	4	231	Rectangle
SPLINTER	12	9	20	36	Oval
SKEWER	4	3	6	132	Oval
LANCE	2	2	4	216	Oval
THUMPER	6	4	10	75	Hexagon
SHOCKWAVE	4	3	7	100	Hexagon
BULWARK	2	2	3	280	Hexagon

Presses needed if every one of them connects in full, at the damage its own chassis actually deals. A real fight is never this tidy – treat these as the ceiling, not the plan.

WHAT A PRESS COSTS YOU

WEAPON	WIND-UP	BURST	RECOVERY	RECHARGE	FULL CYCLE	STOCK
FIREBALL	—	—	—	0.5s	0.5s	—
PEPPERBOX	—	200ms	200ms	1.8s	2s	—
AFTERBURNER	—	—	200ms	13s	13s	—
SPLINTER	—	—	—	0.4s	0.4s	3 banked · 130ms apart
SKEWER	250ms	—	200ms	2.4s	2.65s	—
LANCE	700ms	—	1000ms	16s	16.7s	—
THUMPER	—	—	—	1s	1s	—
SHOCKWAVE	—	—	200ms	5s	5s	—
BULWARK	—	—	200ms	15s	15s	—

Wind-up is before the shot, recovery locks your *others* slots, and the recharge only starts at the press's last shot – which is why the full cycle is the honest number.
